

### **Question 3.26**

**Topic:** Use of Spherical Probes for Flow Test Methods

**Question:** What is the advantage of using the spherical probe for the new flow methods?

**Answer:** In low pitch angle applications, a spherical probe may be easier to read than a DA or DAT probe. This is likely to be less of a consideration, however, if an electronic manometer is used to read the pitch angle pressure, as recommended in Section 6.4 of Method 2F.
