

Question 6.2

Topic: Fuel Sampling

Question: If the recording and reporting of the percent carbon in fuel for use in Equation G-1 is not required, why do we sample for it? Could the value be based on data from the fuel supplier?

Answer: Section 2.1 of Appendix G requires that the carbon content be determined using fuel sampling and analysis. The results of carbon content determinations from the fuel supplier are acceptable, provided that the analytical methods specified in section 2.1.2 of Appendix G are used.
